

Reconfiguration dynamics in and policy mix design for the protein transition

Erik Mathijs

Workshop Pathways to climate resilient agri-food systems in Belgium

Ukkel, 9/12/2025

Overview

protein: shift from animal to plant based human consumption: 60/40 → 40/60

transition: fundamental change in a system's structure, culture and practices

```
graph TD; A["protein: shift from animal to plant based human consumption: 60/40 → 40/60"] --> D["How can the protein transition be accelerated?"]; B["transition: fundamental change in a system's structure, culture and practices"] --> D; C["acceleration: transition management/governance"] --> D;
```

How can the protein transition be accelerated?

acceleration: transition management/governance

State of the art

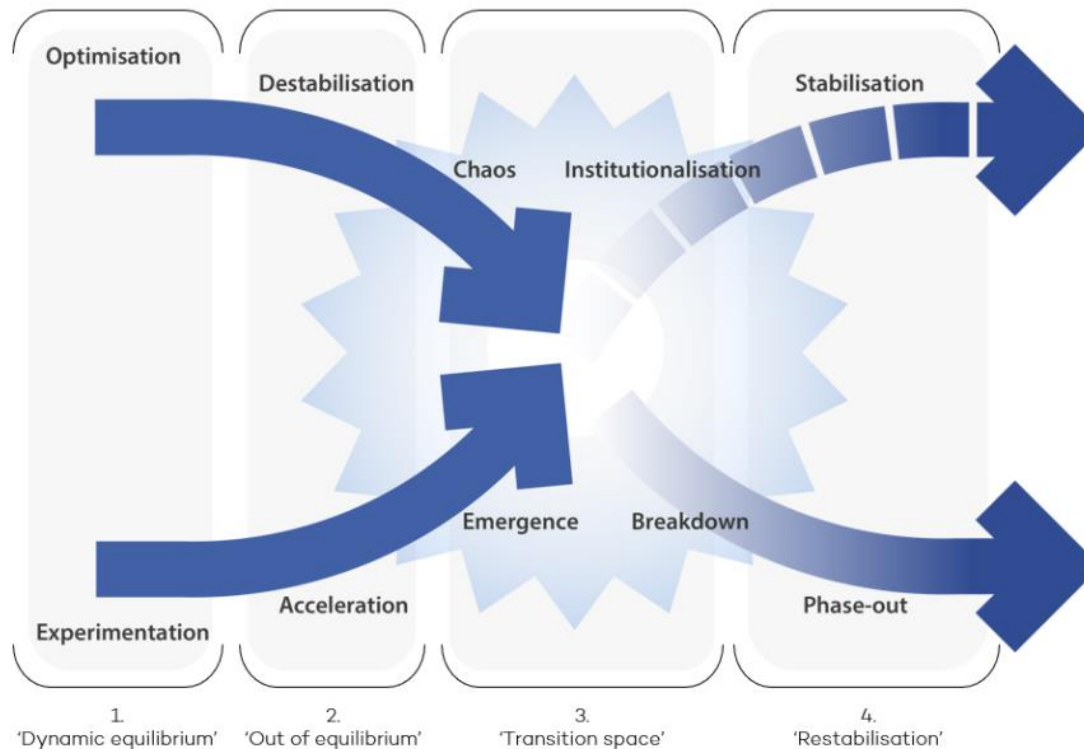

Figure 1. The X-curve framework, which illustrates interacting patterns of build-up and break-down that enable societal transition. The different dynamics one can distinguish in an ideal type situation are outlined in the framework. Figure adapted from Hebinck et al. (2022).

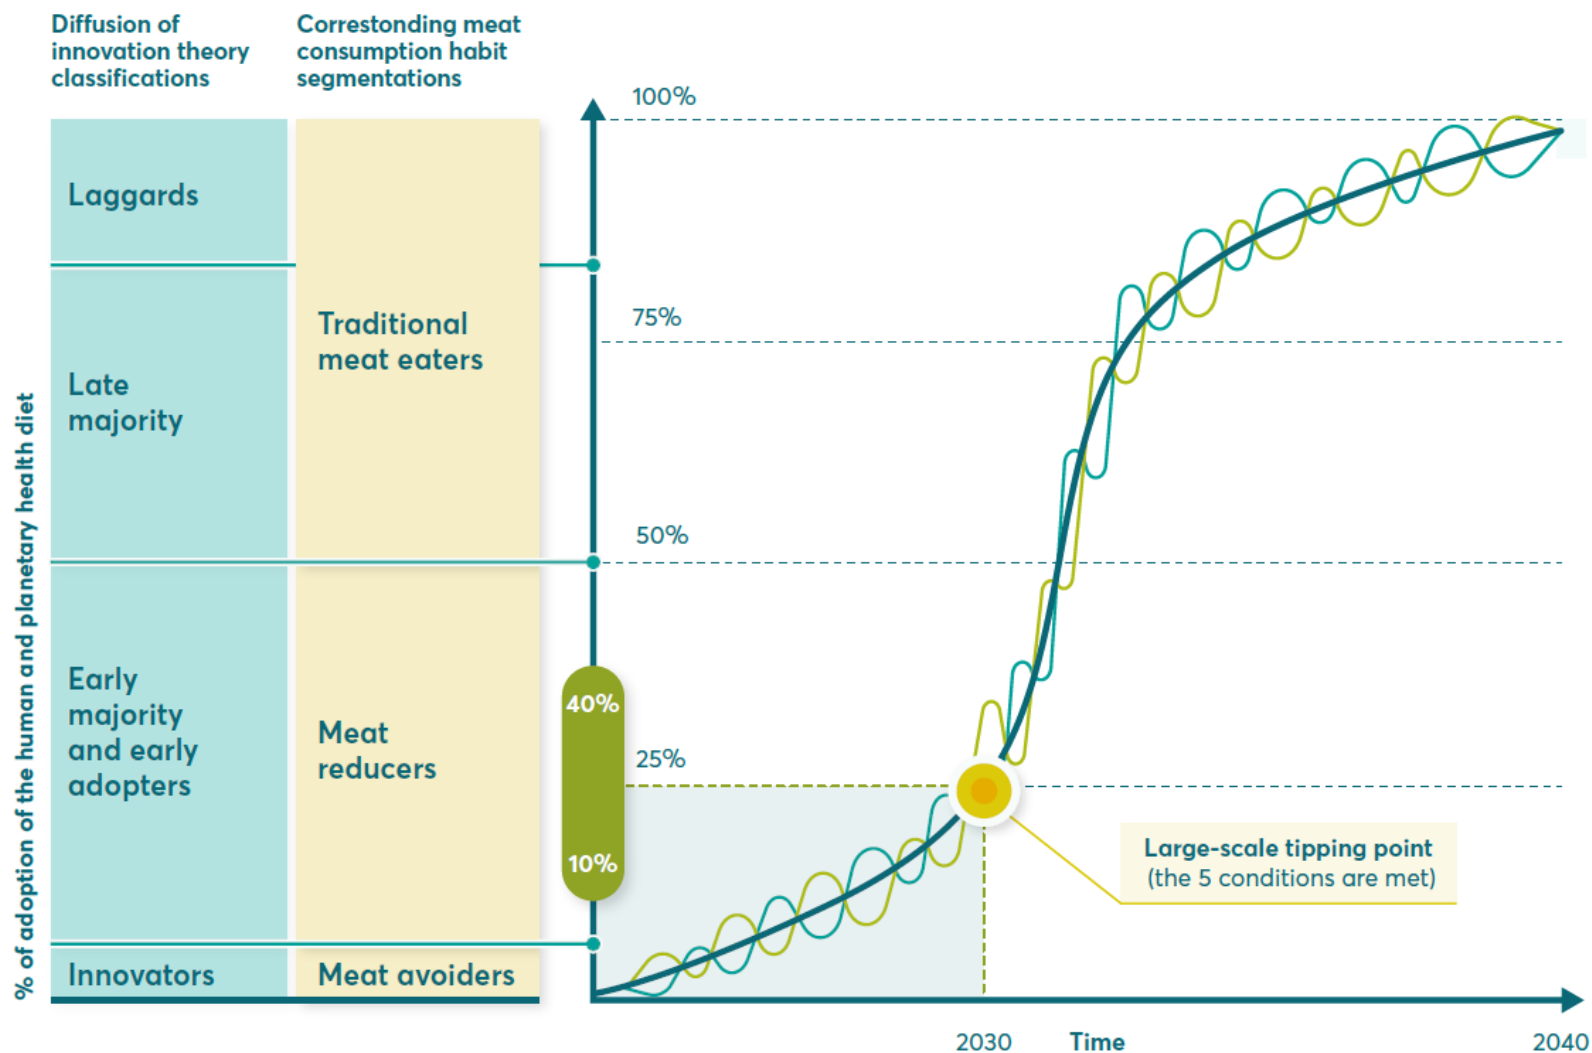

Increasing structuration of activities in local practices

Vegetal protein consumption in g/capita/day - FAOSTAT

Figure 1: Framework for triggering positive tipping points

Please note: this framework does not include exogenous factors directly, but we recognise that they exist and can have fundamental impacts on the systems we are exploring here.

Policy mix

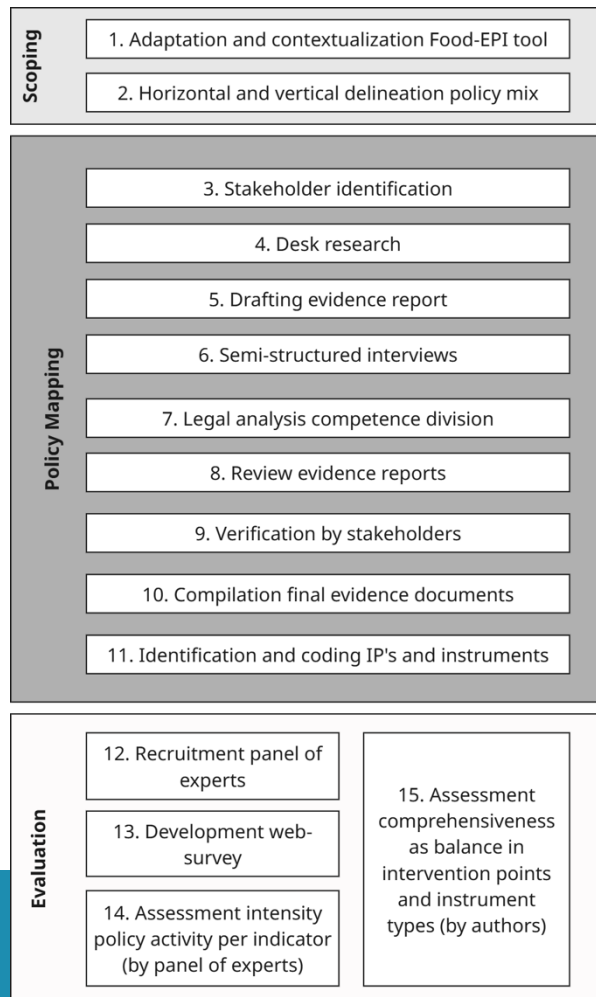

Rogge & Reichardt 2016, *Research Policy*

Policy Intervention Points for Sustainability Transitions

INTERVENTION POINTS	DESCRIPTION	EXAMPLES
IP1: Niche stimulation	Stimulate the emergence of alternative products and practices.	R&D funding schemes, education and training programs
IP2: Niche acceleration	Accelerate diffusion of alternative products and practices through upscaling, institutionalisation and replication.	Incubators, public procurement, standards and labels, advisory services, tax exemptions
IP3: Destabilizing regime	Phasing down unhealthy, unsustainable products and practices.	Taxes, zoning laws, regulations on advertising, dismantling supportive tax structures
IP4: Address repercussion of regime destabilization	Anticipate and manage socio-economic disruption	Support for reskilling, creative labor adjustment programs, chefs training, compensation schemes
IP5: Coordination multi-regime interactions	Utilize synergies between incumbent actors and optimize consistency and coherence of policies	Intersectoral cooperation, coupling health, environmental sustainability and food policy, overarching strategies across policy areas, impact assessments
IP6: Tilt the landscape	Alter broader framework conditions and give direction to change	Overarching strategic frameworks supranational (e.g. European Green Deal, SDG's,...)

Balance in intervention points for the food environment in general (De Bauw et al., 2025)

Green Deal Protein Shift on Our Plate

- Coalition of retail, catering, processing, public authorities, NGOs, knowledge institutes
- Predefined commitments
- Common narrative
- Knowledge sharing network
- Opportunites for collaboration
- Green Deal 1.0: 2021-2025
- Green Deal 2.0: 2025-2029

HALF HALF

Kies de helft van de week voor een plantaardige maaltijd

GREENDEAL

Vlaanderen
in beweging en
gezond samenleven

KU LEUVEN

1

Economic competitiveness:
cost of proposed solution or
practice is lower than
alternative options

Meat price relatively low

2

Performance: solution
outperforms others (e.g.,
efficiency, taste, quality)

Ultraprocessed nature of some alternatives
Performance at meal level (good recipes)

3

Accessibility: Whether a
solution/ behaviour can be
conveniently accessed by
stakeholders

Meat analogues promoted more than legumes
But all widely available in retail (less in
restaurants)

4

Cultural and social norms:
Whether a solution/ behaviour
is socially desirable and
normalised across stakeholders

Half half narrative
Plant-based versus 'veggie'

5

Capability: Whether
stakeholders have the right
information in order to use the
solution/act on the behaviour

Cooking skills of public at large but also of chefs
(e.g., in catering)

Concluding remarks

- Intervention points to be triggered in logical order, but depends on the type of alternative (legumes vs. meat analogues, insect-based etc.)
- Government legitimacy of half half narrative precondition for retail scale-up
- Still insufficient traction for tipping point dynamics (and even stagnation)
- Policy mix: lack of regime-destabilizing measures + measures to address regime destabilization
